**Your one-stop broker**  
for high-quality vinyl windows and doors

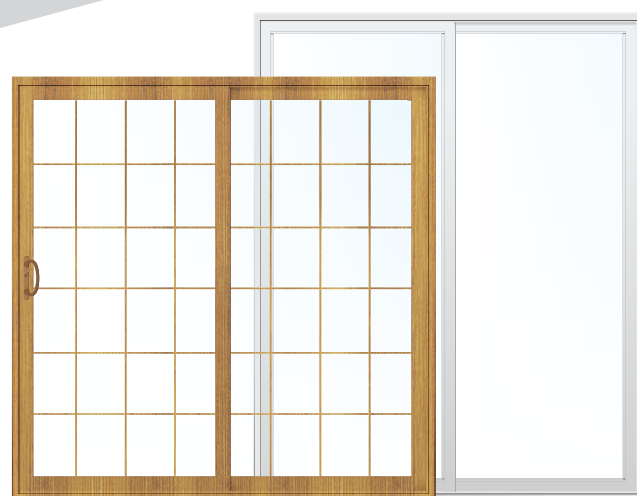

## 600. Patio Door

This sliding door system is an excellent option for those seeking a durable and secure patio door for their home. These doors slide open horizontally, which means they require less space to operate than traditional hinged doors. With large panels of glass, sliding doors can create bright and airy spaces that are filled with natural light. Compared to other American window systems, the Sliding Door system is known for its higher safety standard, providing homeowners with an added sense of security. Additionally, this type of door is versatile and can be used in both traditional and modern architectural designs.

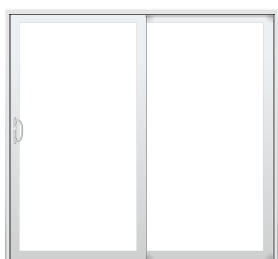

### Main technical parameters of the Patio Door System:

- Depth of frame: 5 1/5"
- Exteriorly glazed sash
- Rigid steel reinforcement of sashes, 1,5 mm thick
- Specially designed chamber for a sliding mosquito net
- Triple weatherseal at interlock
- Integral nailing fin for new-construction applications

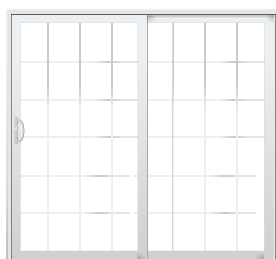

- Available without integral nailing fin for replacement window applications.

## Additional profiles

4481

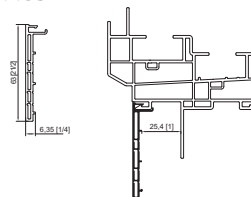

J-Channel is designed specifically for trimming out openings on your wall panels. Windows, doors, and louvers on the walls of your building blend in seamlessly when J-Channel is installed. J-Channel hides the cut lines of panels

4482

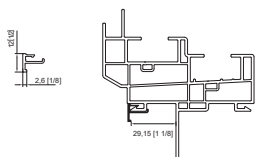

Frame 5/8" Flange  
Profile installed on the exterior sides of a window

4483

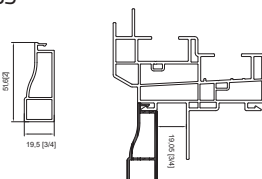

Frame Flush Flange  
Flush-flange window frames are appropriate for any kind of cladding that produces a flat surface. It gives a finished look to a window installation

4484

Stucco key is explicitly designed for new construction homes using stucco. Stucco key features help finish stucco around a window, providing a consistent finishing point. It covers the gap that can result from stucco's

4485

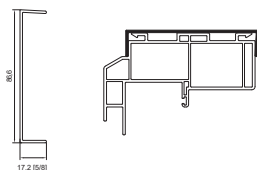

Brick mold gives a finished look to a window installation surrounded by brick.

4486

Mullion cap is designed for mulling two separate window frames together to create a large window.

4488

Head Cover. Also known as a head expander, it is used in replacement window applications where the replacement window is slightly shorter than the existing frame. The head expander can be insulated and covers the gap between the head of the window and the frame, making installation hassle-free.

4489

Jamb Extension. Window jamb extension is an interior window component (in varying depths) that allows the window frame to fit the window opening.
